McGILL UNIVERSITY

FACULTY OF SCIENCE

# FINAL EXAMINATION

## MATH 323

Probability Theory

Examiner: Professor W.J. Anderson
Associate Examiner: Professor M. Asgharian

Date: Wednesday, April 18, 2007
Time: 2 to 5pm

## INSTRUCTIONS

This exam comprises the cover and four pages with 7 questions. Answer all questions. No aids other than pocket calculators are allowed. Tables of the normal distribution are given at the end of this exam paper.

[Marks]

[15] (1) (a) By using only the postulates and definitions, prove that $P(A^c|B) = 1 - P(A|B)$, where $A^c$ denotes the complement of $A$, $P(B) \neq 0$, and $A$ and $B$ are events in the same sample space.

(b) Three companies have submitted tenders to install a new roof on the Olympic Stadium. From past experience, it is known that 30% of all large roofing installations done by Company A leak after one year. The comparable figures for Companies B and C are 5% and 10%, respectively. Assume the bidding process is such that the probability that Company A is awarded the contract is .5, and the corresponding probabilities for B and C are .3 and .2 respectively.

If the roof is leaking after one year, what is the probability that it was installed by Company A?

[15] (2) (a) Urn I contains 4 red chips and 3 white chips. Urn II has 3 red chips and 2 white chips. Two chips are chosen at random and without replacement from each of the urns.

i. What is the probability that the four chips will all be red?

ii. What is the probability of getting 3 red chips and 1 white chip among the four?

(b) The amount of coffee a machine dispenses is an exponentially distributed random variable with mean 100cc. Suppose a cup will overflow if more than 120cc are dispensed. What is the probability that at least two out of five fillings will result in overflow?

[15] (3) (a) Suppose that $X$ is a random variable having the Poisson distribution with mean $\mu > 0$, and such that $P\{X = 3\} = P\{X = 4\}$. Find (i) $\mu$, and (ii) $P\{X \geq 2\}$.

(b) For what value of $k$ is the following a density function?

$$f(x) = \begin{cases} x, & \text{if } 0 < x < 1; \\ k, & \text{if } 1 \leq x < 2; \\ \frac{3-x}{2}, & \text{if } 2 \leq x < 3; \\ 0, & \text{elsewhere.} \end{cases}$$

Suppose $X$ is a random variable with $f$ as its density function. Find $P\{.5 < X \leq 2.5\}$.

[13] (4) (a) If $X$ has density function given by

$$f(x) = \begin{cases} e^{-x} & \text{if } x > 0 \\ 0 & \text{otherwise,} \end{cases}$$

find the density function of $Y = \sqrt{X}$.

(b) An unbalanced die, with probabilities $P(1) = P(2) = 1/12$, $P(3) = P(4) = P(5) = 1/6$, and $P(6) = 1/3$, is tossed twice. Let $X$ be the maximum of the two numbers which occur. Find $E(X)$ and $\mathrm{Var}(X)$.

[12] (5) Let $X_1$ and $X_2$ be independent random variables with distributions $N(2,3)$ and $N(3,2)$ respectively. Let

$$Y = 2X_1 + X_2$$
$$Z = X_1 - 3X_2.$$

Find (i) the distribution of $Z$ (ii) the correlation coefficient between $Y$ and $Z$.

[15] (6) Random variables $X$ and $Y$ are jointly continuous with joint density function

$$f(x,y) = \begin{cases} x + y, & \text{if } 0 < x < 1,\ 0 < y < 1; \\ 0, & \text{otherwise.} \end{cases}$$

Find (a) $E(Y)$ (b) $E(X|Y = .5)$ (c) $E(XY)$ (d) $P(X^2 > Y)$.

[15] (7) The number of goals a star soccer player can score in one game is a random variable $X$ with probability function given by

| x | 0 | 1 | 2 | 3 |
|---|---|---|---|---|
| $P\{X = x\}$ | 1/8 | 3/8 | 1/8 | 3/8 |

(a) What are the mean and variance of $X$?

(b) Suppose there are 36 games in the season and that the numbers $X_1, X_2, \ldots, X_{36}$ of goals scored in these games by the star player are independent and have the probability function given above. Let $Y$ be the total number of goals scored by this player in the season. Find (approximately) $P\{Y \geq 60\}$.

## Upper tail probabilities of the standard Normal distribution
$P(Z \geq z),\ Z \sim N(0,1)$

| $z$ | 0.00 | 0.01 | 0.02 | 0.03 | 0.04 | 0.05 | 0.06 | 0.07 | 0.08 | 0.09 |
